DETAILED ACTION

The amendment filed June 28, 2005 has been entered. Claims 7-18 are canceled. Claims 1-6 are pending.

Election/Restrictions

Applicant's election without traverse of invention I in the reply filed on June 28, 2005 is acknowledged.

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

The information disclosure statement (IDS) submitted on August 5, 2003 was considered by the examiner.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim 5 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not

Art Unit: 3618

described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. In particular, claim 5 requires the controller operation to occur in a "PI control." However, a "PI control" is not disclosed.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 4, and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamaguchi et al. US 5,823,281 and Sumi US 6,054,776.

Yamaguchi et al. disclose a hybrid vehicle drive control apparatus comprising an electric generator 16 mechanically connected to an engine 11, a generator brake B, and a controller 41. See Figures 1 and 4. While engaging the generator brake, the controller decreases generator torque instantaneously rather than gradually. See column 12, lines 3-5.

However, Sumi teaches the desirability of reducing torque gradually by performing a torque control, which necessarily involves controlling rotational speed. See column 13, lines 27-37. From the teachings of Sumi, decreasing the generator torque of Yamaguchi et al. gradually, rather than instantaneously, would have been

Art Unit: 3618

obvious to one of ordinary skill in the art at the time the invention was made. This would reduce shock in the system produced by rapid torque reduction.

Allowable Subject Matter

Claims 2 and 3 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Tabata et al., Omote, Baumgaertner et al., and Aoki et al. disclose hybrid vehicle drive control systems. Carr et al. disclose a generator control system.
